1. Executive Summary

Zappy is a cloud-based Restaurant Operating System (ROS) for India's food service market. It replaces paper-based workflows with a fully digital, real-time platform — from the customer's phone to the kitchen, billing counter, and management dashboard. No hardware required. No app download.

■2 Crore Seed Round Ask	10-15% Equity Offered	■1,200 Cr TAM India	53 Features Shipped
---	---	---	---

The Opportunity

India has over 7.5 million restaurants, 68% under-digitised. The food service market grows at 9% CAGR (■4.2 lakh crore). Current solutions are expensive (Petpooja ■1,800/mo, Posist ■3,000/mo), require hardware, or lack AI and real-time sync.

The Solution

One URL, five dashboards, five roles — **Customer** (QR digital menu + AI), **Kitchen** (real-time KDS), **Waiter** (table management), **Billing** (invoicing + analytics), **Admin/Super Admin** (full SaaS management console). Built on React 18 + Supabase Realtime WebSockets.

The Ask

■2 Crore seed to hire team, execute GTM in Tamil Nadu, reach 200 paying restaurants (■2.88 Cr ARR) by Month 18. Series A of ■15-25 Crore planned at Month 24.

2. Company & Project Overview

Company	Zappy Restaurant OS
Product	Zappy — The Restaurant Operating System
Stage	MVP Live — Seeking Seed Investment
Founded	January 2026
Location	Chennai, Tamil Nadu, India
Website	zappy-blond.vercel.app
Contact	zappyscan@gmail.com
Funding	■2 Crore Seed Round
Equity	10-15% (negotiable)
Use of Funds	Engineering 40% · Sales 30% · Ops 15% · Working Capital 10% · Legal 5%
Target M18	200 paying restaurants, ■2.88 Crore ARR
Series A	■15-25 Crore at Month 24 (■80L MRR target)

Vision & Mission

Vision: The operating system for every restaurant in India.

Mission: Replace chaos with clarity — eliminate paper tickets, broken communication, and revenue leakage from India's ■4.2 lakh crore restaurant industry.

"Zappy turns the average restaurant into a smart restaurant — no hardware, no app download, no chaos."

3. Problem Statement

Despite India's massive food service market, 68% of restaurants operate on manual, paper-based workflows — causing four critical revenue-destroying problems:

23% Order Error Rate	−30% Revenue Lost (Slow Turns)	47% Staff Time Wasted	■ 2L+ Monthly Loss Avg
--	--	---	--

Paper Ticket Chaos (23% order error rate)

Orders written on paper are frequently lost, misread, or delivered wrong. Manual entry errors cost 23% of order accuracy, wasting food and damaging customer trust.

Slow Table Turns (−30% revenue from idle tables)

Manual billing takes 8-12 minutes per table. Peak-hour efficiency collapses. Every idle table minute is direct revenue loss.

Zero Kitchen Sync (47% staff time wasted)

Kitchen has no visibility into table status. Waiters have no visibility into kitchen progress. Total disconnect causes cold food and frustrated customers.

No Analytics (■2L+ monthly revenue loss)

No data on popular items, peak hours, or staff performance. Every decision is made on gut feeling, leading to avoidable losses.

4. Market Opportunity

The Indian food service technology market is a significant untapped opportunity. 7.5 million restaurants in a ₹4.2 lakh crore food service industry, growing at 9% CAGR — with the majority still running on pen and paper.

Segment	Size	Count	Notes
TAM — Total Addressable Market	₹1,200 Cr	7.5M restaurants	All India restaurants benefiting from digital r
SAM — Serviceable Addressable Market	₹120 Cr	750K restaurants	Mid-tier, tech-ready restaurants open to digi
SOM — Year 3 Target	₹12 Cr	5,000 restaurants	Tier 1-2 cities, Year 3 penetration target

Market Drivers

- UPI-first, smartphone-native Indian consumer expects digital everywhere — including restaurants
- Post-COVID push towards contactless dining and touchless payment
- Rising labor costs make automation immediately ROI-positive at ₹999/mo subscription
- Cloud kitchen boom (35% YoY growth) drives demand for multi-location digital management
- ONDC network and 'Digital India' initiative creating favorable policy environment

5. Our Solution — Product & Features

Zappy is a single-URL platform connecting every restaurant stakeholder in real-time. A customer scans QR → kitchen gets order instantly → waiter sees table status → billing generates invoice → owner sees revenue. Simultaneously.

5-Step Customer Flow

Step 1	Scan QR Code Customer scans table QR. No app download. Works on any smartphone.
Step 2	Select Seat Customer picks seat. A personalized session is created.
Step 3	Browse & Order Digital menu with photos, AI suggestions, ratings. Add to cart.
Step 4	Kitchen Alert Order appears instantly on KDS by station. Chef acknowledges.
Step 5	Serve & Bill Customer notified at each stage. One-tap invoice at the end.

■ Customer Digital Menu

QR-based access (no download)

- Seat selection and session management
- Full digital menu with AI food pairings
- 5-stage live order tracking
- Waiter call button
- Post-order reviews
- Promotional banners

■ Kitchen Display System (KDS)

Real-time Kanban order board

- Multi-station routing (Kitchen/Bar/Dessert)
- Status: Pending→Preparing→Ready→Served
- TV Mode for wall displays
- Completely paperless

■ Waiter Dashboard

Real-time table grid with color-coded status

- Waiter call notifications (acknowledge/resolve)
- Active session management
- Order status visibility across all tables

■ Billing Counter

One-click invoice generation

- Multi-payment support
- Daily revenue summary
- 7-day trend charts
- Export-ready billing history

■ Restaurant Admin

Menu CRUD with AI tags

- QR code generator
- Table configuration
- Staff management
- Revenue analytics
- Promotions and inventory

■ Super Admin SaaS Console

Multi-tenant management

- Tenant onboarding
- Subscription plan assignment
- Platform MRR dashboard
- Platform ads
- Lead CRM

6. Technology Stack

Modern, scalable, enterprise-grade architecture built for multi-tenant SaaS from day one.

Layer	Technology	Purpose
Frontend	React 18 + TypeScript	Type-safe component UI
Build Tool	Vite 5.4	Fast HMR, optimized production builds
Styling	Tailwind CSS + shadcn/ui	Utility-first + accessible Radix UI
Backend/BaaS	Supabase (PostgreSQL)	Relational DB with Row Level Security
Real-time	Supabase Realtime WebSockets	Zero-latency push across all 5 dashboards
Auth	Supabase Auth + JWT + RBAC	5-role authentication system
Multi-tenancy	Row Level Security (RLS)	PostgreSQL-level data isolation per tenant
AI/ML	Custom Recommendation Engine	Food pairing, trending tags, smart suggestions
Serverless	Supabase Edge Functions	Business logic APIs — no dedicated server
Deployment	Vercel Edge CDN	Global, instant rollbacks, preview branches
CI/CD	GitHub Actions	Auto-deploy pipeline on push to main

Key Technical Differentiators

- Sub-100ms order sync via WebSocket — zero page refresh across all 5 roles simultaneously
- Multi-tenant data isolation at PostgreSQL layer (Row Level Security) — no cross-tenant data leakage
- Zero-installation SaaS — entire platform runs in any browser, no app store or hardware dependency
- 5 distinct RBAC roles with separate routes, UIs, and database access policies

7. Business Model & Revenue Streams

Multi-stream SaaS revenue with predictable MRR as core. Free tier acquires, Pro/Enterprise monetize.

SaaS Subscription (Primary Revenue) █999-█2,999/month

Monthly recurring fees: Free (acquisition), Pro (█999), Enterprise (█2,999). 200 restaurants at avg █2,400/mo = █4.8L MRR.

Transaction Commission (Scale Revenue) 0.5-1% per order

Small commission on GMV processed. At 10,000 orders/day × █350 avg = █17.5-35L/month additional at scale.

Platform Advertising CPC model

Restaurants pay to feature banners on customer-facing digital menu. Weekend specials, seasonal promotions, new item launches.

Setup & Onboarding (One-time) █5,000-█25,000

Enterprise onboarding: custom setup, staff training, QR hardware kits, white-label branding for hotel chains.

82%	2%	█3,500	15:1
Target Gross Margin	Monthly Churn Target	Cust. Acq. Cost	LTV:CAC Ratio

8. Pricing Plans

Three-tier model: Free for discovery, Pro for growing restaurants, Enterprise for hotel chains.

Feature	Starter (Free)	Pro (■999/mo)	Enterprise (■2,999/mo)
Branches	1	3	Unlimited
Digital Menu + QR	Basic	Full + AI	Full + White-label
Kitchen Display	Yes	Yes	Yes
Waiter Dashboard	No	Yes	Yes
Billing Counter	No	Yes	Yes
Tables	Up to 5	Up to 20	Unlimited
Analytics	No	Revenue dashboard	Advanced + AI
Support	Email	Priority email	Dedicated manager
Setup Fee	None	None	■5K-■25K

9. Competitive Landscape

No competitor offers Zappy's combination of real-time multi-role dashboards + AI + QR ordering + free tier + SaaS multi-tenancy.

Feature	Zappy	Petpooja	Posist	Limetray	Paper
QR-based Ordering	YES	Partial	NO	Partial	NO
Real-time Kitchen Sync	YES	YES	YES	Partial	NO
5 Role Dashboards	YES	Partial	YES	NO	NO
AI Food Suggestions	YES	NO	NO	NO	NO
Customer Order Tracking	YES	NO	NO	Partial	NO
SaaS Multi-tenant	YES	NO	Partial	NO	NO
Free Tier	YES	NO	NO	Partial	YES
No Hardware Required	YES	NO	NO	NO	YES
Starting Price/mo	■0	■1,800	■3,000	■1,500	■0

Zappy is the **ONLY** platform combining AI + real-time QR ordering + 5 integrated role dashboards + SaaS multi-tenancy — starting at **■0/month**.

10. Traction & Milestones

Built from scratch in 6 months. MVP live on Vercel. Comprehensive feature testing completed across all 5 dashboards. GO FOR LAUNCH verdict issued.

53	v2.4.1	5	4
Features Shipped	Production Version	User Roles	Live Tenants

Development Timeline

Jan 2026	Project Inception Architecture, DB schema, multi-tenant design
Feb 2026	Core Infrastructure Supabase, authentication, RBAC, base routing
Mar 2026	Customer & Kitchen QR menu flow, Kitchen Display System, WebSocket realtime
Apr 2026	Waiter, Billing, Admin All three dashboards live and tested
May 2026	Super Admin + AI Platform console, multi-tenancy, AI suggestions, analytics
Jun 2026	MVP Complete — GO FOR LAUNCH 53 features tested. Live on Vercel. Seeking █2Cr seed.

11. Financial Projections

Conservative projections: 2% monthly churn, █2,400 avg revenue/restaurant, █3,500 CAC. Breakeven target: Month 18.

Metric	Month 6	Month 12 (Y1)	Month 18	Month 24 (Y2)	Month 36 (Y3)
Paying Restaurants	20	50	200	400	600+
Monthly MRR	█48K	█1.2L	█4.8L	█9.6L	█14.4L
Annual ARR	█5.76L	█14.4L	█57.6L	█1.15Cr	█1.73Cr
Gross Margin	65%	72%	78%	82%	85%
Monthly Burn	█8L	█9L	█10L	█12L	█15L
Cash Status	█1.52Cr rem	█1.02Cr rem	Break-even→	Profitable	Growing

Key Assumptions

- Average revenue/restaurant: █2,400/month (weighted Free/Pro/Enterprise blend)
- Monthly churn: 2% (industry benchmark 2-4% for B2B SaaS)
- Customer Acquisition Cost: █3,500 (direct sales + digital marketing blend)
- LTV:CAC: 15:1 target (50-month average customer lifetime)
- Gross margin expands from 65% (Y1) to 85% (Y3) as infra costs amortize
- Series A trigger: █80L MRR at Month 24 → raise █15-25 Crore

12. Go-to-Market Strategy

Geographic expansion model: dominate locally → scale regionally → go national. Each phase leverages prior phase's customer base for referrals and social proof.

Phase 1: Months 1-6 — Chennai & Tamil Nadu

Target: 20 paying restaurants, ■48K MRR

- 2-person field sales team + 1 Customer Success rep
- Direct outreach to 500 restaurants (Nungambakkam, T.Nagar, OMR)
- Free tier as primary acquisition — zero-friction onboarding
- Restaurant association tie-ups (NRAI Tamil Nadu, AHAR)

Phase 2: Months 7-12 — South India

Target: 50 paying restaurants, ■1.2L MRR

- Expand to Bengaluru, Hyderabad, Kochi
- 5-person sales team with regional managers
- Referral program: ■500 credit per referred paying restaurant
- PR coverage: YourStory, Inc42, Entracker

Phase 3: Months 13-24 — National Scale

Target: 200+ restaurants, ■4.8L MRR by M18 → 400+ by M24

- Top 10 Indian cities: Delhi, Mumbai, Pune, Ahmedabad, Kolkata
- Enterprise sales for hotel chains and franchise groups
- Cloud kitchen vertical with specialized features
- Series A fundraise to accelerate national GTM

13. Product Roadmap

Product roadmap prioritises mobile-first access, hardware integration, and ecosystem partnerships.

Q3 2026 — NOW

- Custom domain www.zappy.ind.in
- Razorpay payment integration
- PWA mobile optimization
- First 10 paying restaurant clients

Q4 2026 — 6 months

- React Native mobile app (iOS + Android)
- Multi-language support (Tamil, Hindi, Telugu)
- Customer loyalty points system
- Advanced analytics heatmaps

Q1 2027 — 9 months

- QR hardware kits (table stands)
- Franchise management console
- ML recommendation engine v2
- Hotel chain white-label solution

Q2 2027 — 12 months

- Series A fundraise (■15-25 Crore)
- Swiggy/Zomato integration
- Offline mode with sync-on-connect
- 500 restaurant milestone

14. Team

Built by a focused founding team. Seeking strategic investors who add domain expertise and network alongside capital.

[CEO / Co-Founder — Fill Name] — Product & Business Strategy

Architected and built Zappy end-to-end in 6 months. Responsible for product vision, investor relations, and GTM. Deep understanding of both technical execution and market dynamics.

[CTO / Co-Founder — Fill Name] — Engineering & Architecture

Full-stack engineer who built React + Supabase architecture from the ground up. Leads technical hiring, engineering team, AI/ML roadmap, and platform scalability.

[Head of Sales — Fill Name] — Sales & Restaurant Partnerships

8+ years restaurant industry experience. Onboarded 100+ outlets to digital platforms. Deep relationships with restaurant owners across Tamil Nadu.

[Advisor — Fill Name] — Industry Expert & Investor Network

Former VP at a leading Indian restaurant-tech company. Domain expertise, product-market fit validation, and strategic investor network access.

Hiring: Backend Engineer · Sales Executive (Chennai/Bengaluru) · Growth Marketer

Contact: zappyscan@gmail.com

15. Investment Ask & Use of Funds

■2 Crore Seed Round	10-15% Equity	18 months Runway	Month 24 Series A
---	-------------------------------------	--	---

Use of Funds

- 40% — ■80 Lakhs — Product & Engineering

2 full-stack engineers · React Native mobile app · AI/ML v2 · Infrastructure scaling for 1,000+ restaurants
- 30% — ■60 Lakhs — Sales & Marketing

3-person field sales team · Digital campaigns (Google, Meta) · Industry events · PR/media
- 15% — ■30 Lakhs — Operations

Customer success team · QR hardware kits · Staff training programs
- 10% — ■20 Lakhs — Working Capital

18-month runway buffer · Cloud infra (Supabase, Vercel) · Contingency
- 5% — ■10 Lakhs — Legal & Compliance

Company incorporation · IP/trademark · Data privacy · Contracts

Return Potential: Seed investors at 10-15% equity could see 5-8× return by Series A (Month 24) at ■80L MRR run-rate, based on comparable Indian SaaS multiples.

16. Risks & Mitigation

Slow Restaurant Adoption [HIGH RISK]

Risk: Restaurant owners resist changing established workflows.

Mitigation: Free tier removes financial barrier. White-glove onboarding. ROI visible within first week.

Established Competitor Response [MEDIUM RISK]

Risk: Petpooja/Posist add QR/AI features to compete.

Mitigation: Zappy's integrated real-time multi-role UX is built from ground up — not bolted-on features. Price moat (■0 vs ■1,800+).

Free Tier Non-conversion [MEDIUM RISK]

Risk: Restaurants stay on Free and never convert.

Mitigation: Pro features (Waiter, Analytics, AI) withheld from Free. Target conversion: 15%. Free creates referrals.

Technical Scaling [LOW RISK]

Risk: Supabase Realtime performance at 1,000+ concurrent connections.

Mitigation: Supabase enterprise tier handles millions of connections. Architecture designed for horizontal scaling.

Team Bandwidth [MEDIUM RISK]

Risk: Single-founder execution limits sales and product velocity.

Mitigation: Seed funding's primary goal is team building. CTO hire within 30 days of closing.

17. Appendix — Technical Architecture

Database Schema

Core PostgreSQL tables: **restaurants** (tenant registry), **profiles** (users with role), **menu_items** (per-restaurant menu with AI tags), **tables** (physical configuration), **orders** (lifecycle), **order_items** (line items), **subscription_plans**, **restaurant_subscriptions**, **platform_promotions**.

Security

- Row Level Security (RLS) at PostgreSQL layer — complete tenant data isolation
- JWT tokens issued by Supabase Auth, validated on every API request
- 5 user roles with distinct RLS policies: super_admin, restaurant_admin, kitchen_staff, waiter, customer
- Anon key for customer menu (read-only public access without authentication)

Real-time Architecture

Supabase Realtime uses WebSocket connections to push PostgreSQL change events (INSERT/UPDATE/DELETE) to subscribed clients. Kitchen subscribes to orders for their restaurant_id. Waiter subscribes to tables and waiter_calls. Customer subscribes to their specific order_id. Sub-100ms sync, zero page refresh.

Deployment

Hosting	Vercel Edge Network — production at zappy-blond.vercel.app
Database	Supabase (AWS ap-south-1, Mumbai) — PostgreSQL 15
Realtime	Supabase Realtime WebSocket service
CI/CD	GitHub → Vercel: auto-deploy on push to main
Environment	Env vars managed in Vercel Dashboard (not committed to repo)

Thank You for Your Interest in Zappy

We believe Zappy is the right product, at the right time, for the largest untapped opportunity in Indian food-tech. We're building the operating system that every restaurant in India will run on. We'd love your partnership — not just your capital.
